An interview was conducted on the above-identified application on _____

NOTE: This form should be completed and filed by applicant in advance of the interview (see MPEP § 713.01). If this form is signed by a registered practitioner not of record, the Office will accept this as an indication that he or she is authorized to conduct an interview on behalf of the principal (37 CFR 1.32(a)(3)) pursuant to 37 CFR 1.34. This is not a power of attorney to any above named practitioner. See the Instruction Sheet for this form, which is incorporated by reference. By signing this form, applicant or practitioner is certifying that he or she has read the Instruction Sheet. After the interview is conducted, applicant is advised to file a statement of the substance of this interview (37 CFR 1.133(b)) as soon as possible. This application will not be delayed from issue because of applicant's failure to submit a written record of this interview.

Applicant/Applicant's Representative Signature

Confirmation No.: 3766
Examiner: Larry Thrower
Art Unit: 1742

SUMMARY OF ARGUMENTS FOR PROPOSED TELEPHONE INTERVIEW

In response to your Advisory Action mailed November 16, 2010, Applicant contends that amending independent claim 3 to include dependent claim 4 overcomes the Kleefeldt reference.

The Examiner contends that Kleefeldt discloses an actuating pin 12, which as disclosed in Kleefeldt is part of a metal plate 2, and a first metal plate 14. The Examiner states in the Advisory Action that "the cover 8 is molded to the first metal plate in the mold die and around the actuating pin to at least partially englobe the actuating pin in the cover, which is no less than is required by the instant claims."

However, if the cover 8 is molded to the first metal plate 14 in the mold die and around the actuating pin 12 to at least partially englobe the actuating pin 12 in the cover 8, as the Examiner contends, then the steps in claim 4 cannot be accomplished. Namely, (i) removing the first metal plate 14 and co-molded shell from the mold die, (ii) assembling actuating members to the actuating pin 12, and (iii) placing a second metal plate against a seal gasket to close the housing formed by the shell between the first metal plate 14 and second metal plate. This is because there already is a first metal plate 14 and a second metal plate 2.

Proposed claim:

A method for fabricating a supporting assembly for a lock and actuating assembly of a motor vehicle, the lock comprising a plurality of mobile members hinged to corresponding lock pins, the actuating assembly having a plurality of actuating members hinged to an actuating pin for operating the lock, and the supporting assembly comprising a shell made of plastic material defining a housing for at least one of the mobile members of the lock and a first metal plate supporting the lock pins, the method comprising the steps of:

placing the first metal plate into a mold die;

inserting the actuating pin into the mold die separate and spaced from the first metal plate;

molding the shell to the first metal plate in the mold die and around the actuating pin to englobe the actuating pin in the shell; [[and]]

~~The method as set forth in claim 3 further including the steps of molding a seal~~
gasket around the peripheral edge of the shell in the mold die[.];
removing the first metal plate and co-molded shell from the mold die[.];
assembling the mobile members to the lock pins and the actuating members to the
actuating pin housed within the shell[.]; and
placing a second metal plate against the seal gasket to close the housing formed
by the shell between the first and second metal plates.
